Graphite Fiber-Reinforced Polytetrafluoroethylene (GFP)

Material Data Sheet
M-10.5 (Rev. 01; 06-16-20)
Overview
GFP, a reinforced graphite fiber PTFE material, is used in moderate to extreme service conditions. This material has excellent wear resistance in a wide range of speeds, in medium pressures, and in high temperatures. GFP performs well in water and other liquid solutions and has limited use in vacuum or inert gas applications. Dynamic surfaces in contact with a seal made from GFP should have a hardness of 40 Rc or higher. GFP is recommended for applications that require good wear resistance in liquids and humid conditions at temperatures from -320 °F to +500 °F (–196 °C to +260 °C).

Chemical Compatibility
GFP has excellent chemical compatibility. This material is compatible with most fluids and gases, except some acids (such as sulfuric, nitric, and hydrofluoric acids). For more compatibility information, refer to report TR-60A.

Compliance
GFP is not FDA compliant or compatible. Bal Seal defines compliant materials as compositions in which all ingredients are designated by the FDA to be “safe for use in food contact.” In addition, none of the ingredients are listed on the California Code of Regulations Hazardous Substance list (https://www.dir.ca.gov/title8/339.html). Bal Seal defines compatible materials as compositions in which the majority (67%) of ingredients are designated by the FDA to be “safe for use in food contact.” In addition, none of the ingredients are listed on the California Code of Regulations Hazardous Substance list (https://www.dir.ca.gov/title8/339.html).

Color
Black (color variations may occur during processing).

Heat Treatment
Certain seal sizes are supplied as GFP HT with a heat treatment to limit dimensional changes. Material properties and composition remain the same.
The information, descriptions, recommendations and opinions set forth herein are offered solely for your consideration, inquiry, and verification and are not, in part or in whole, to be construed as constituting a warranty, expressed or implied, nor shall they form or be a part of the basis of any bargain with Bal Seal Engineering, Inc. If any sample or model was shown to or provided by Buyer/User, such sample or model was used merely to illustrate the general description and type of goods. Such use is not to be construed as a warranty that the goods will conform to the sample or model. Furthermore, THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE AND ALL OTHER WARRANTIES, IMPLIED OR EXPRESSED, ARE EXCLUDED AND SHALL NOT APPLY. This document provides product options for further investigation by Buyers/Users having technical expertise. The Buyer/User, through its own analysis and testing, is solely responsible for making the final selection of the products and for assuming that all performance, safety and warning requirements for the application are met. It is recommended that Buyers/Users run evaluation testing under actual service conditions to determine whether proposed Bal Seal Engineering products are suitable for the intended purpose. Nothing contained herein or in any of our literature shall be considered a license or recommendation for any use that may infringe patent rights. (LE-17)

Advantages

• Reduced extrusion
• High wear resistance
• Increased creep resistance

Application Examples

• Downhole logging tools
• Adhesive and epoxy dispensing equipment
• Chemical/laboratory equipment

Other Information
